

Query and Analysis

➔ Create flexible, customized reports and deliver extensive analysis and business intelligence to your organization.

Be enterprising.

Knowing what direction to take in business is essential. Whether it's acquiring new companies, launching a new product, finding a new way to beat the competition, or another avenue of pursuit, it's important to know where you're headed and why.

Leverage experience.

That takes real business intelligence and reporting proficiency, so that managers at all levels of your organization receive the information they need to make strategic decisions. With so much at stake, finding the right information technology partner to back your efforts is also essential. Infor™ is that partner. We deliver proven, business-specific solutions with experience built in.

Get business specific.

Our solution—Infor PM Query and Analysis—is a dynamic, multi-language, multi-currency business intelligence tool that is powerful, secure, flexible, and easy to use. The solution's integration with Microsoft® Office® enables quick client uptake with minimal training and technical skills required. Using familiar desktop applications, you can quickly and efficiently create and analyze reports that target the information you seek by highlighting trends, patterns, and exceptions. A common user interface across the entire product range simplifies the learning experience and makes Query and Analysis accessible to all levels of management. And since minimal IT support and involvement are required, maintenance is easy, too.

INFOR[™]
be enterprising

Features and components include:

Drilldown and cube analysis

Query and Analysis allows users to drill down from a report to the supporting live transaction information. They can make inquiries on figures any way they want. Then the solution displays results from OLAP and relational databases in a multi-dimensional cube. This is powerful and intuitive business intelligence which yields results that can be drilled on, charted, and saved as a cube and, when necessary, emailed to other users for their interpretation.

Strategic analysis

Getting the right information to the right people at the right time, Query and Analysis allows your managers to analyze your data and accurately measure your performance, and then use this information to set goals and do forecasting.

Query and Analysis Executive

When you want to conduct inquiries and perform comprehensive examination of enterprise application data using analysis tools such as drilldown, expand, breakout and cube analysis, Query and Analysis Executive is there for you. This integrated business intelligence component provides direct, browser-based access to enterprise application data from within a familiar desktop environment, facilitating the inquiry and analysis of financial information. Even remote users have the ability to run and interrogate the underlying application databases using reports defined by the system.

Query and Analysis XL and Client for Microsoft Word

These components provide dynamic links between enterprise application data and Microsoft applications with the means to integrate this information into an Excel spreadsheet, as well as prepare data in Excel for import into enterprise application databases. Information can also be merged with memos, structured report packs, and application documentation (listings) created in Word.

Query and Analysis Alert

This component enhances your ability to identify, analyze, and report on performance and trends concealed within your database. It automates aspects of the reporting and scheduling process, thus facilitating information delivery.

See results now.

A major advance in the provision of analytics, business intelligence, reporting, and alerting software using familiar desktop tools, Infor PM's Query and Analysis solution can help your company generate a fast return through:

- The ability to get users up to speed very quickly with minimal IT involvement
- A better understanding of trends, patterns, and exceptions affecting your business
- Improved business intelligence for decision-making purposes
