Manage change with confidence.

Finance departments face greater complexity today than ever before. Responding to changing regulations, reporting requirements, and business strategies is a standard part of your job description. Rapid access to information is a must; however, you need not just data, but context. The ability to see how everyday decisions impact the bigger picture means the difference between a strategic finance department and one relegated to the sidelines.

Get rapid access to not just data, but context.

For too long, accessing financial data has been a complex and cumbersome process. Today, contextual financial reporting and business intelligence is still most often the domain of IT or a handful of specially trained users. As a result, the potential of many finance departments is severely restricted, putting limits on the business contributions they can ultimately deliver.

Take control with Infor10™ Query & Analysis Context and Context Designer. Leveraging the latest in Infor technology and designed to work as a core element of Infor10 Financials Business (SunSystems), this solution puts contextual business information where it belongs—at the fingertips of you and your staff.

Put dynamically generated, relevant business information at the fingertips of your finance team with Infor10 Query & Analysis Context and Context Designer.

Take control.

You can view context-sensitive data automatically and from within a single screen with Infor10 Query & Analysis Context, a business intelligence solution for Infor10 Financials Business (SunSystems) users. You'll be able to leverage the solution’s web parts, or containers for information, to execute multiple queries and dynamically display relevant business information during routine financial processing. You get single sign-on, common navigation, and a common look and feel across both Infor and non-Infor products thanks to our Infor10 Workspace viewing platform.

Because you get standard templates with Context, you can quickly and easily deploy the most widely used web parts. You can also configure Context to meet users’ specific needs, allowing them to view the information most relevant to their jobs.

You can configure and develop web parts for use across the enterprise with Infor10 Query & Analysis Context Designer, the administrative component of Context. An easy-to-use tool that does not require IT involvement, Context Designer extends the value of your Context solution, making it easily adaptable to changing business needs.
Take a proactive approach to financial management.

You and your staff can take a proactive approach to financial management with the combined power of Infor10 Query & Analysis Context and Context Designer. You’ll get real-time data delivered directly to your desktop, because the solution automatically brings to the surface information that would have been difficult or impossible to access before.

For example, if you were reviewing receivables for a particular customer, a web part could automatically display the last ten receivables for that company. You could see which invoices had been paid, and in which amounts, without ever leaving your screen.

If a problem existed, you could identify and act on it immediately, rather than reacting when it was eventually uncovered somewhere down the line. And when you moved on to the next customer, the information displayed would change dynamically.

You can even choose the data format that suits you best, including charts, maps, tabular displays of data, and other formats.

In addition, you can leverage Context across both Infor and non-Infor applications through the use of Datalinks to other systems. You get access to information business-wide with nothing more than the click of your mouse.

Put the power of information at your fingertips.

Infor10 Query & Analysis Context puts the power of information directly into the hands of you and your staff. Using this solution, you can:

• Deliver real-time, context-sensitive information to Financials Business users.
• Get access to not just financial information, but data across your organization.
• Proactively address problems with enhanced business insight.
• Reduce errors and business risk.
• Increase participation in decision making.
• Improve productivity by reducing or eliminating the need to navigate between applications.
• Quickly and easily perform higher value analysis.
• Customize the information delivered to each user.

Give your finance function the information and resources to do much more than just process transactions with proactive analysis capabilities.
Powered by Innovative Technology

Infor’s latest technologies drive our proven applications to new levels of usability, connectivity, and insight. Some of these technologies include:

**INFOR10 MOTION**

Put the power of your Infor applications on your tablet or smart phone, so that you can be productive on the run. Purpose-built mobile apps, such as Infor10 Road Warrior, provide an easy-to-use way to make your sales force more effective when they’re on the go. Another mobile app, Infor10 Activity Deck, instantly alerts you of critical actions in your business and allows you to forward or approve actions with a single click.

**INFOR10 ION**

The keystone of Infor’s technology framework, Infor10 ION delivers enterprise connectivity, process workflow, and event management in one unbreakable architecture. ION simplifies connectivity between your current Infor applications and third party solutions, whether they’re on-premises, in the cloud, or both. Embedded workflow helps you control and innovate your business processes across the enterprise and Event Management brings real-time alerts and actions to your desktop, tablet, or phone—so you can keep your finger on the pulse of business and respond immediately. With Infor10 ION, your systems and your people respond faster and with better information.

**REPORTING AND ANALYTICS**

Through the Infor10 Business Vault, you’ll work smarter and more confidently because all the reports originate from the same, reliable source—even when the information is drawn from several systems across the business. Business Analytics deliver actionable information based on your role and your industry so you get the information you need for your job, the way you want to see it. You will have the power to turn that information into insight with multiple, analytical views on your performance.
